

Requirements and Solutions

Bottle crates need to be cleaned after decrating to remove foreign objects and surface soiling. The crate turner removes foreign objects. The crate washer removes surface soiling. The Innoclean KW is a compact spray crate washer made of stainless steel (AISI 304 (1.4301)) designed to wash all standard plastic beverage crates. The treatment zones are arranged according to customer requirements. All processing needs can be met by offering machines of various lengths and numbers of lanes.

Key Features

- Self-supporting, welded machine design
- Height-adjustable feet for installation clear of the floor
- Large inspection windows
- Stainless steel spray tubes
- Operator-free machine

Standard Equipment

- Closed roof structure – no escaping vapors
- Stainless steel flat-top chains
- Easy changeover for various crate formats
- Fresh water spraying with angle-adjustable fan nozzles
- Single-bath machine with hot and fresh water treatment

Advantages

- Compact design
- Designed for economy
- High process reliability

Service

- Customized machine design
- Fast supply of spare parts
- Worldwide service

Options

- High-pressure spraying for extremely dirty crates
- Fresh water sprays automatically switched off in the event of stoppages
- Two-bath version available with caustic spraying
- Automatic belt discharges
- Pressure filter for media filtration media to extend periods between maintenance intervals

Technical Data

Machine Capacity

500 crates/hr to 13,000 crates/hr

Available processing widths

Single and double-lane machines

Processable container types

Returnable plastic crates
